Standalone Modules

Learners can complete any module as a standalone course and will receive an ETDP SETA Statement of Results. Individual module pricing available on request.

SAQA Qualification ID 22901

ABOUT THE COURSE

This popular and adaptable course explores a wide variety of methods and approaches to environmental teaching and learning during the contact sessions. There is a strong hands-on focus and flexibility to incorporate a particular environmental issue or risk.

Candidates with this qualification will be able to:

- Demonstrate knowledge of environmental education goals, principles and methods and their appropriateness in different contexts
- Select, plan and adapt a contextually-relevant environmental learning programme
- Implement and evaluate an environmental learning programme
- Select, adapt and use existing environmental learning support materials and develop own supplementary learning aids
- Network broadly in order to source information and support around a key environmental issue or risk and recommend possible solutions
- Research and analyse a local environmental issue in terms of principles of environmental justice and sustainability
- Apply appropriate social protocols in the workplace and community
- Apply fundamental knowledge of environmental ethics to a field of work or study
- Demonstrate a general understanding of people-environment relationships and current environmental challenges
- Review a variety of approaches to learning, teaching and evaluation.

SUITABLE FOR: Municipal employees, private sector, environmental education practitioners, educators, general public and community/traditional leaders aiming to equip others with improved environmental understanding and skills for sustainability.

WHAT'S INCLUDED

Course rates are inclusive of VAT, tuition fees, lunches, teas, learner materials, training venue, field trips/activities, assessment, moderation, verification and certification. Course rates are exclusive of accommodation, breakfasts, dinners and transport to and from the venue.

Contact us for our payment terms and conditions.

ABOUT THE COURSE *cont.*

Module 1: Professional Development (29 credits)

Involves the collection of evidence of the learner's professional development and ability to work in the field as a professional environmental practitioner.

Module 2: Understanding Environmental-People Relationships (26 Credits)

This module addresses human impact on our natural and built environment and explores the ways in which individuals, society, nations and international institutions can actively contribute towards sustainability.

Module 3: Environmental Ethics (13 credits)

The module covers understanding perceptions and developing an ethical code of conduct for the environment. The learning creates an awareness of how our notions of "right" and "wrong" are formed, how we become more aware of conscious of our own values and beliefs and how these lead to what we do and how we behave in this world. We look at the field of environmental ethics and learn the language that helps us to talk about this complicated field in more depth.

Module 4: Develop an Environmental Learning Programme (DELP) (26 Credits)

A wide range of educational resources and materials are investigated to assist in the learner being able to develop tools and resources for learning.

Module 5: Facilitate & evaluate an Environmental Learner Programme (FEELP) (28 Credits)

Investigate a wide range of methods and approaches to teaching and learning. Hands-on, practical skills to implement and assess environmental learning programmes.

I have learnt a lot of new things and I think this extended a better scope of my understanding towards subjects of the environmental economics, environmental justice as well as ecological infrastructure."

Patrick Sibisi, Department of Cooperative Governance and Traditional Affairs (COGTA). Enviro Eds November 2014
